

Abstract

A filter plate (10) comprises a body (12) having at least one flow path (16) for fluid to be filtered and one filter medium arrangement (14) arranged in the at least one flow path (16) and connected to the body (12). The filter medium arrangement (14) is connected to the filter plate body (12) by sintering, soldering, gluing or bonding. Further, methods of producing the filter plate and its use in a rotary filter are disclosed.
